

# WEB HOSTING PLAN

*Premier website hosting plan that covers security, updates, backups, etc.*

## Why managed hosting is important

See, websites are no longer a "set and forget" part of your business. As technology evolves, website software must be updated constantly to make it more secure, faster and more visible to search engines. Just like Microsoft Office and your smartphone software needs updating, so too does your website. More importantly, your website is a crucial part of your business and therefore requires extra care to ensure it continues to excel in its functions.

These are the benefits of our website care plans:

### Security

weekly scripts run for security monitoring of any potential threats to the site. uptime monitoring to make sure the site is actually online and available to use

### Speed

super fast page loading times which continually impacts improvement of search engine visibility and results, and makes your website's visitors happy

### Backups

daily and weekly backups of your website and database files and storage on our secure offsite servers (owned and operated by WP Engine, a leading WordPress host)

### Updates

peace of mind that all software is up to date, secure against any unwelcome attacks and actually online and operational for your customers and users to find you online

## SUPERCHARGE YOUR WEBSITE WITH US

### Questions?

Ross would be more than happy to answer your questions, or help you with your next big marketing goal!
